VISION
To provide a far-reaching services to all of their clients

Established in 2010, PT Digitech Hasanah is an Electrical Supplying company focused on selling industrial segment products. Specializing in the Original Equipment Manufacturer (OEM) industry, Power Distribution and Automation. Digitech Hasanah is ready to answer every need of your company.

In its early days Digitech Hasanah focused only on Human Machine Interface (HMI) products, a system that connects people and machines by using Graphic User Interface (GUI) on a computer screen. In 2010, HMI was yet a prevalent product and not widely used in Indonesia so there is no distributor that focuses on this particular product.

Digitech Hasanah also saw the opportunity and began to focus on marketing HMI products to the industry in need. Along with HMI, Digitech Hasanah also markets Programmable Logic Controller (PLC), a microprocessor used for industrial process automation. In fact, HMI and PLC are basically two systems that cannot be used separately. One segment that uses HMI and PLC is OEM, good example would be machine maker in food industry.

With the passage of time, Digitech Hasanah's has grown bigger and is predicted to continue to grow, as the company always keeps the promises that they make and assists with solutions to any problem that might come up.

In 2015, due to Digitech Hasanah's good reputation and great results in handling OEM market, Schneider Electric has given them the trust to handle OEM market as an official OEM Distributor.

Wanting to stop at nothing, Digitech Hasanah spreading its wings even wider. After being an expert on the low voltage segment, Digitech Hasanah reached out to medium voltage segment which includes cubicle and transformers. Having a team with great experience and knowledge, Digitech Hasanah is confident to satisfy their market in this area.

In 2017, the market for Medium Voltage and Low Voltage has grown in demand and competitive for price and good quality products. In accordance to the demands, Digitech Hasanah has decided to bring out Smart Power Distribution products to the market, which has more competitive price but without decreasing its product's quality.

This is in accordance with the company's philosophy, a digital company engaged in the field of technology with the practice of good deed so that it may always be the answer and solution for their clients. This become the foundation in everything they do and become a corporate culture that satisfy each and every client.

MISSION

To excell in their field and to be the trusted solution to each and every problem.
